**NEW PERSPECTIVE
FROM BEHIND THE
WHEEL**

If you or someone you know repeatedly drives under the influence of alcohol, new research indicates that there may be an underlying problem that needs addressing.

According to the new study, more than half of repeat DUI (Driving Under the Influence) offenders suffer from a least one mental disorder. In fact, nearly 60 percent of the repeat offenders studied reported experiencing major depression, bipolar disorder, obsessive-compulsive disorder, or post-traumatic stress disorder over their lifetimes, in addition to a drug or alcohol-use disorder.

This finding points out the need to deal with underlying conditions in addition to a drug or alcohol abuse. A comprehensive approach to the problem is more likely to deal with it successfully.

Of course, if you or a loved one is wrestling with an addiction or behaving in an unsafe manner--like driving drunk--it's vital that you get help as soon as possible. Other addictions such as gambling, drugs, compulsive shopping, food technology, porn, and sex have parallel brain neurotransmissions that impact the pleasure center of the brain.

Until this is understood and interrupted, people crave those "pleasures." We provide a safe space and proven techniques for dealing with your addiction as well as help you deal with the underlying cause. You deserve to be healthy again. Our address is 2639 New Pinery Rd., Suite 1, or you can call 608-742-5020 to make an appointment.

Offering you and your family compassionate and professional advice.

P.S.: Driving under the influence of alcohol and/or drugs places the greater community at danger; therefore, we all have a responsibility to address this potentially life-threatening problem.
